

## BGT gas treatment

### CHARACTERISTICS

- best availability and stability
- simple and proven technology
- proven biogas compressor technology
- rotary vane compressor
- FC-controlled compressor speed
- reduced power consumption
- low maintenance cost
- easy to maintain
- PLC-controlled
- remote monitoring and maintenance capability
- condensate monitoring system
- built-in gasdetector
- prevented Ex-Zone
- built-in small-sized high capacity siloxane filter (option)
- suitable for outdoor installation (option)
- additional treatment steps available such as desulphurisation (options)
- best adapted features to enhance and simplify your installation
- Swiss made

15 years of experience with biogas treatment for microturbines

120 bio- and natural gas installations commissioned  
wide range of installations: 30kW to 800kW electrical  
WWTP, biogas, landfill, well gas
